

1.write blog on the difference between documents and window object:

window

document

---

It is the object of window property.

It is the object of the browser.

---

All the tags, elements with attributes in HTML are part of the document.

Global objects, functions, and variables of JavaScript are members of the window object.

---

codkata practice

Code Kata is an attempt to bring this element of practice to software development. A kata is an exercise in karate where you repeat a form many, many times, ...
